Boston, MA | (617)-893-9727 | lubarskyevan@gmail.com | [linkedin.com/in/evanlubarsky](https://www.linkedin.com/in/evanlubarsky) | Portfolio: evanlubarsky.com

Professional Summary

Junior Mechanical Engineering student with hands-on experience in CAD, electromechanical prototyping, computer vision, and autonomous systems. Seeking internships in mechanical design, production, aerospace, robotics, or manufacturing.

Education

University of Maryland

College Park, MD

B.S. Mechanical Engineering | GPA: 3.6/4.0

Expected May 2028

- Coursework: Mechanics I-II, Electronics I, Thermodynamics, Dynamics, Computing Fundamentals, Engineering Design.

Projects

Computer Vision Face-Tracking Phone Mount, *Independent Project | Designer & Developer*

June 2026 – Present

- Designed, FDM 3D-printed, and assembled a two-axis pan-tilt phone mount in SOLIDWORKS using threaded inserts and standard machine hardware.
- Integrated a Raspberry Pi 4, Raspberry Pi Camera, Arduino Uno, and two MG996R servo motors into a complete electromechanical tracking system.
- Programmed real-time face detection and tracking in Python/OpenCV and Arduino C/C++ control for independent pan and tilt movement.
- Developed a ball-plunger detent mechanism for portrait and landscape positioning and refined the assembly to improve rigidity, alignment, and motion.

Autonomous Over-Terrain Vehicle *Engineering Design Course Project | Project Manager*

January 2026 – May 2026

- Led an eight-person team through the CAD, fabrication, assembly, and testing of a 1.5 kg Mecanum-wheel autonomous vehicle.
- Designed and iterated chassis, crane, and sensor-mount components in SOLIDWORKS and Onshape for laser cutting and FDM 3D printing.
- Integrated motors, ultrasonic sensors, fans, a crane mechanism, and an ACEBOTT controller into the completed electromechanical system.
- Implemented Python navigation using Wi-Fi overhead-camera QR localization for x-y position and heading; completed the course and extinguished four candles in under five minutes.

Engineering Involvement

University of Maryland Accessible Prosthetics Initiative, *Mechanical Design Team*

August 2025 – Present

- Developing a myoelectric prosthetic arm that uses surface electromyography (sEMG) electrodes to detect muscle activation and control motor-driven hand movement.
- Adapted a spring-based mechanism from TU Delft research into the hand prototype to improve flexibility and reduce component count.

American Society of Mechanical Engineers (ASME), *Student Member*

February 2026 – Present

Professional Experience

JCC Greater Boston, *Outdoor Pool Front Desk Manager*

August 2023 – Present

- Manage daily pool operations, including member check-in, access verification, occupancy tracking, and coordination with lifeguards and facility staff.
- Process guest-pass and concession sales, manage cash transactions, and maintain accurate daily financial records.

Skills

CAD: SOLIDWORKS, Onshape, Autodesk Fusion 360, GD&T

Programming: Python, MATLAB, Arduino C/C++, OpenCV

Manufacturing: FDM 3D Printing, Laser Cutting, Manual Milling, Soldering, Breadboarding

Hardware: Arduino Uno, Raspberry Pi, Servo Motors, Electromechanical Assembly

Languages: Russian (Fluent), French (Intermediate), German (Beginner)
